main.c

Run ▶

```c

int main()
{
    char plain[100], key[100], cipher[100];
    int i, n, k;

    printf("Enter plaintext: ");
    scanf("%s", plain);

    printf("Enter key: ");
    scanf("%s", key);

    n = strlen(plain);
    k = strlen(key);

    for(i = 0; i < n; i++)
    {
        cipher[i] = ((plain[i] - 'A') +
                     (key[i % k] - 'A')) % 26 + 'A';
    }

    cipher[n] = '\0';

    printf("Ciphertext: %s\n", cipher);

    return 0;
}
```

Output

```
Enter plaintext: ATTACK
Enter key: KEY
Ciphertext: KXRKGI
```
